

Please do not rush to implement Broadband over Power Line (BPL) technology. As an avid short wave listener, Ham Radio Operator and Communications Engineer I find fault with this process on many levels. Once the Genie is out of the bottle it is impossible to put it back, the same is true of BPL. I believe there is available spectrum to accomplish the task in a coordinated, licensed and regulated manner. The existing BPL proposal has no defined a level of interference to existing users and will raise the noise floor and interference temperature to a level that precludes other existing spectrum users from current usage.

Thank you,

John L. Davis
